

The Deer Genome: From Molecules to Management

Randy DeYoung
Deer Associates
March 4, 2016

A photograph of a deer standing in a field of tall, dry grass and some green bushes in the background. The deer is facing towards the right of the frame.

Why Deer?

- Negative value
 - Ecological damage...?
 - Auto collisions \$1.7B
 - Attacks on humans <\$1M
 - Diseases...?
 - Ag loss \$0.6B
 - Loss of timber \$1.6B
 - Household damage \$0.5B
- Total \$>4.4B
- Net value \$12.2B
- Positive value
 - Ecological...?
 - Existence, aesthetic...?
 - Recreational (hunting) \$12B
 - Recreational (viewing) \$4.6B
- Net: >\$16.6B

Deer Genome Project

- Needs: understand antler development at cellular level
- Gene expression requires high-quality genome resource
- Sample growing antler at different stages in captive deer

Albert and Margaret Alkek Ungulate Research Facility

Results

- Genome resource completed...
- What's next?

**Answer questions relative to
ecology and management...**

The Molecular “Toolbox”

- **Genetic markers inherited in known manner from parents**
 - ID individuals
 - Parentage, relatedness
 - Identify unique groups
 - subspecies, management units
- Determine landscape factors influencing animal movements

189	80	76	2	0.0952
191	19	19	0	0.0226

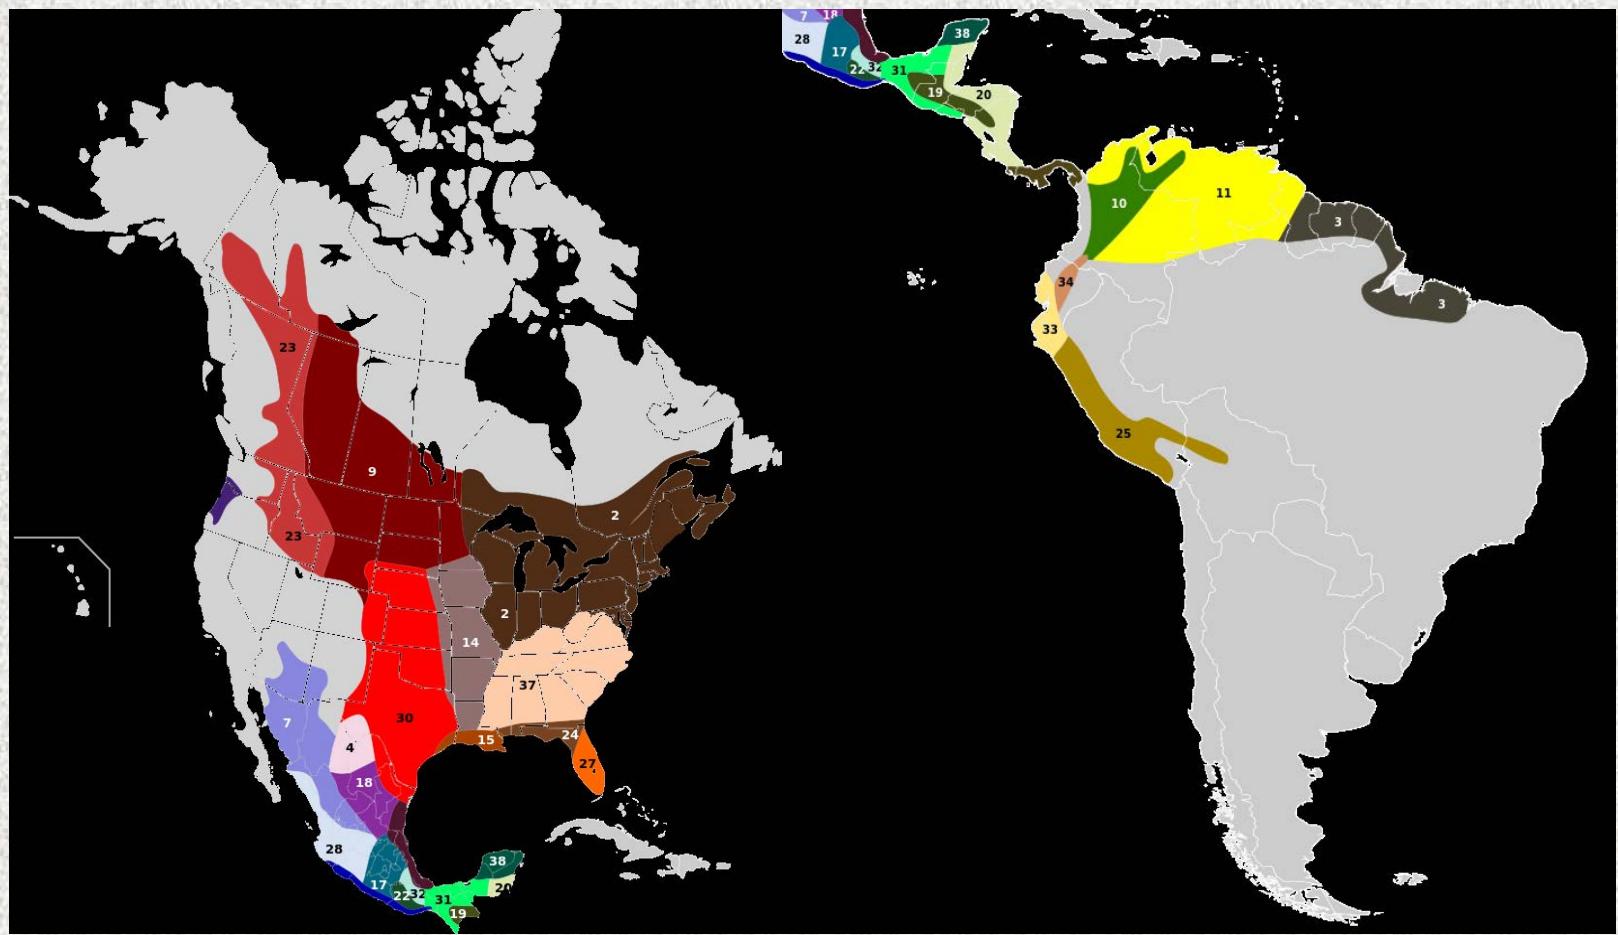

Genetic Markers

- Nuclear and mtDNA (proteins)
 - Coding, non-coding DNA
 - structural and regulatory genes
 - introns, repetitive sequences
 - Inherited from 1 or both parents
 - Different mutation rates

Extensive Geographic Range

- 4 million years
- Tropical forest
- Mountains
- Desert
- Plains
- Boreal

Understand how deer have adapted to different environments: tropical, mountains, desert, plains, boreal

"Texas Deer"
175 lb or more

"Coues Deer"
85-100 lb

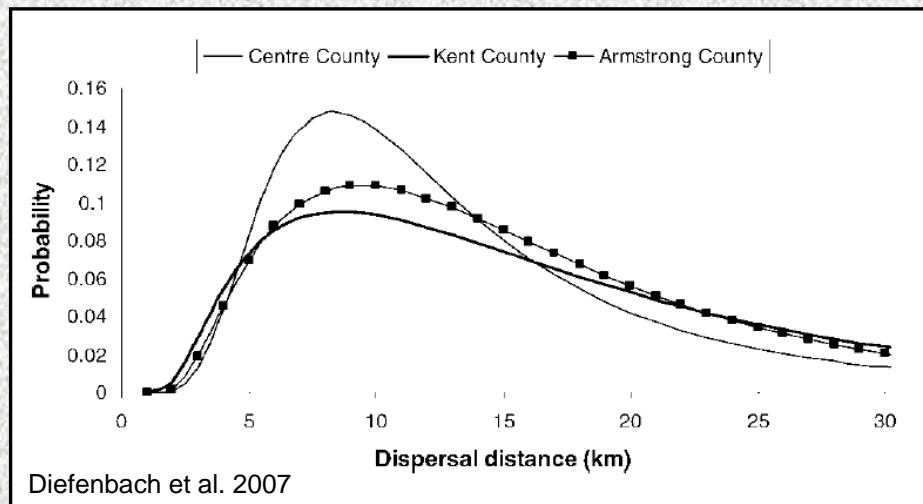

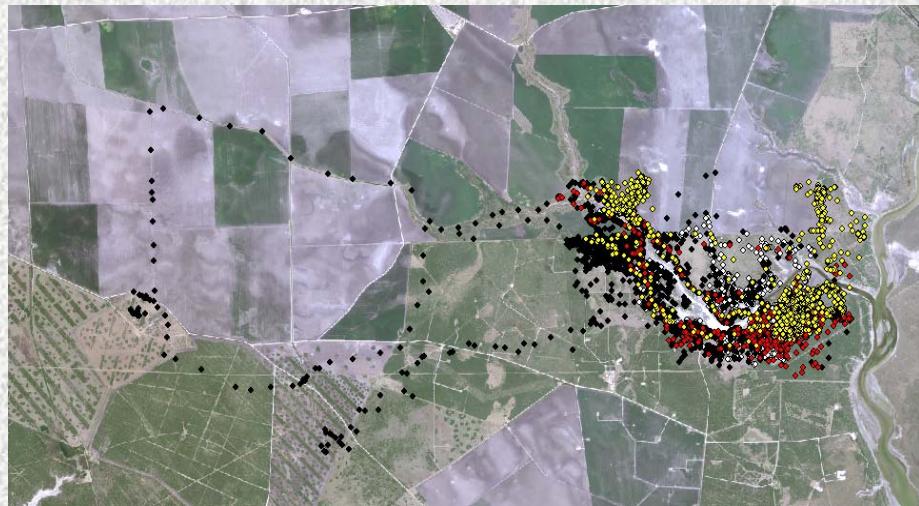

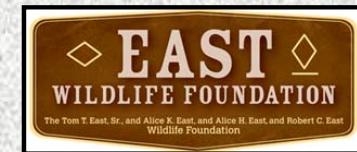

"Yucatan Deer"
80-90 lb

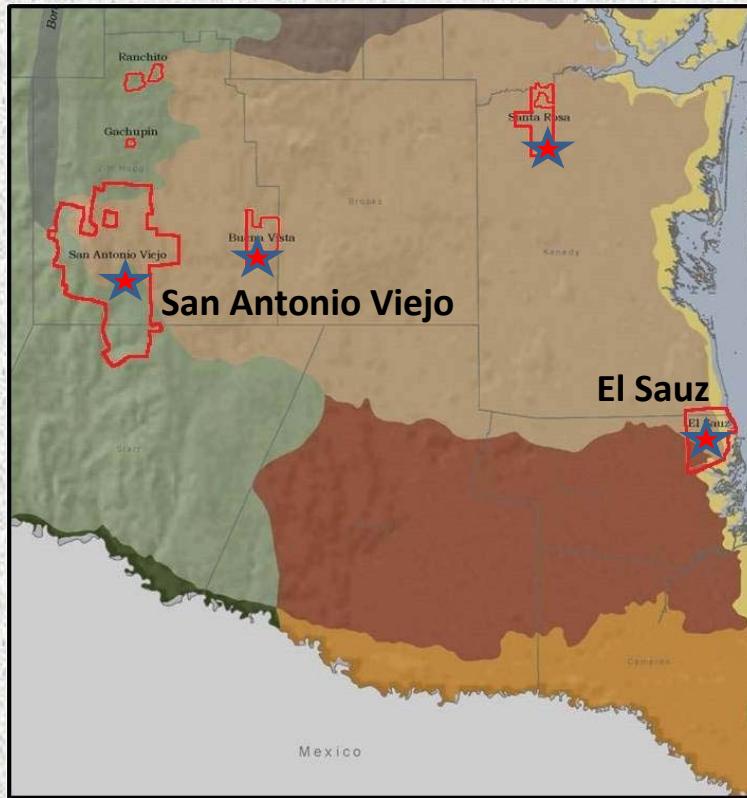

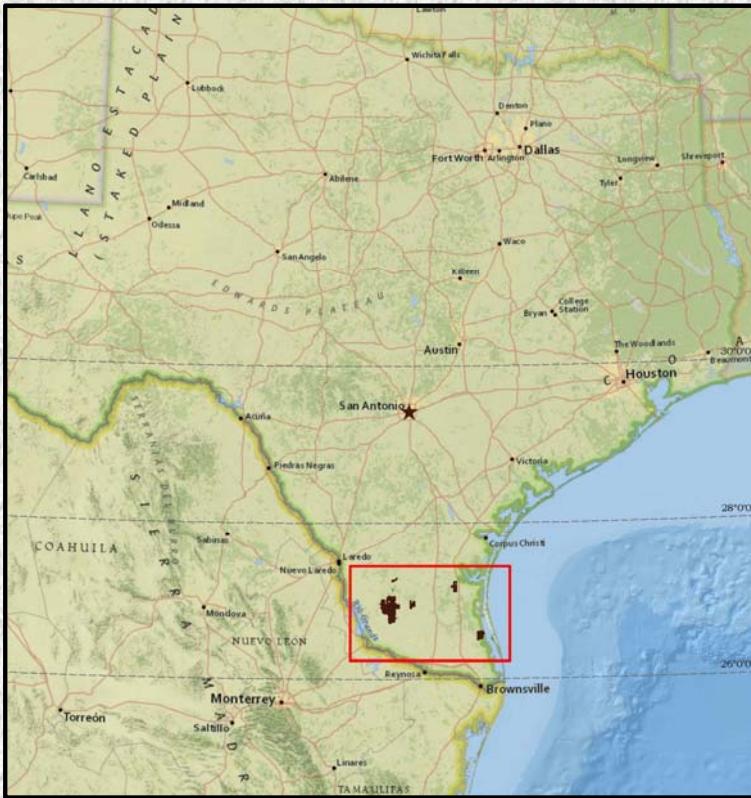

Management

- Social dimension
- Biological dimension
- Scale: “Population?”
 - Landscape
 - Dispersal
 - Seasonal movements

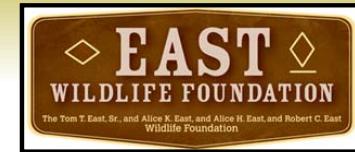

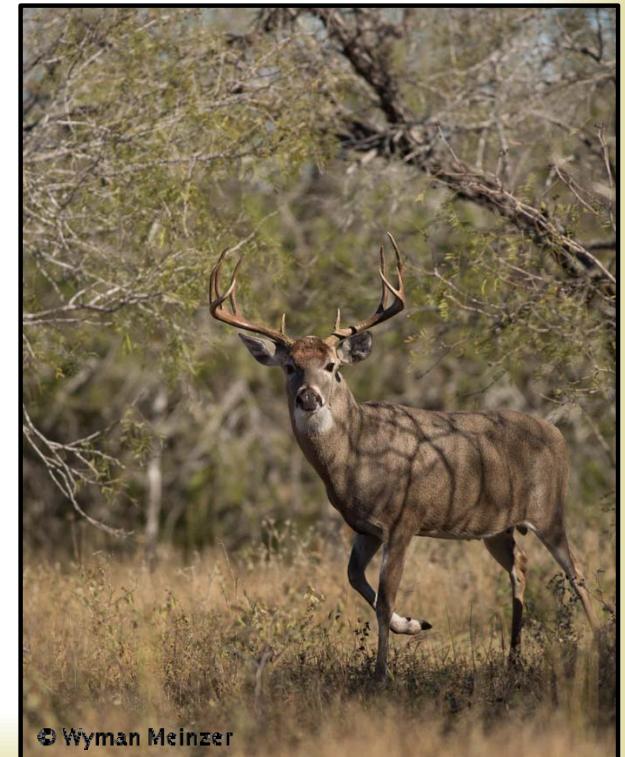

Why do some ranches have bigger deer than others?

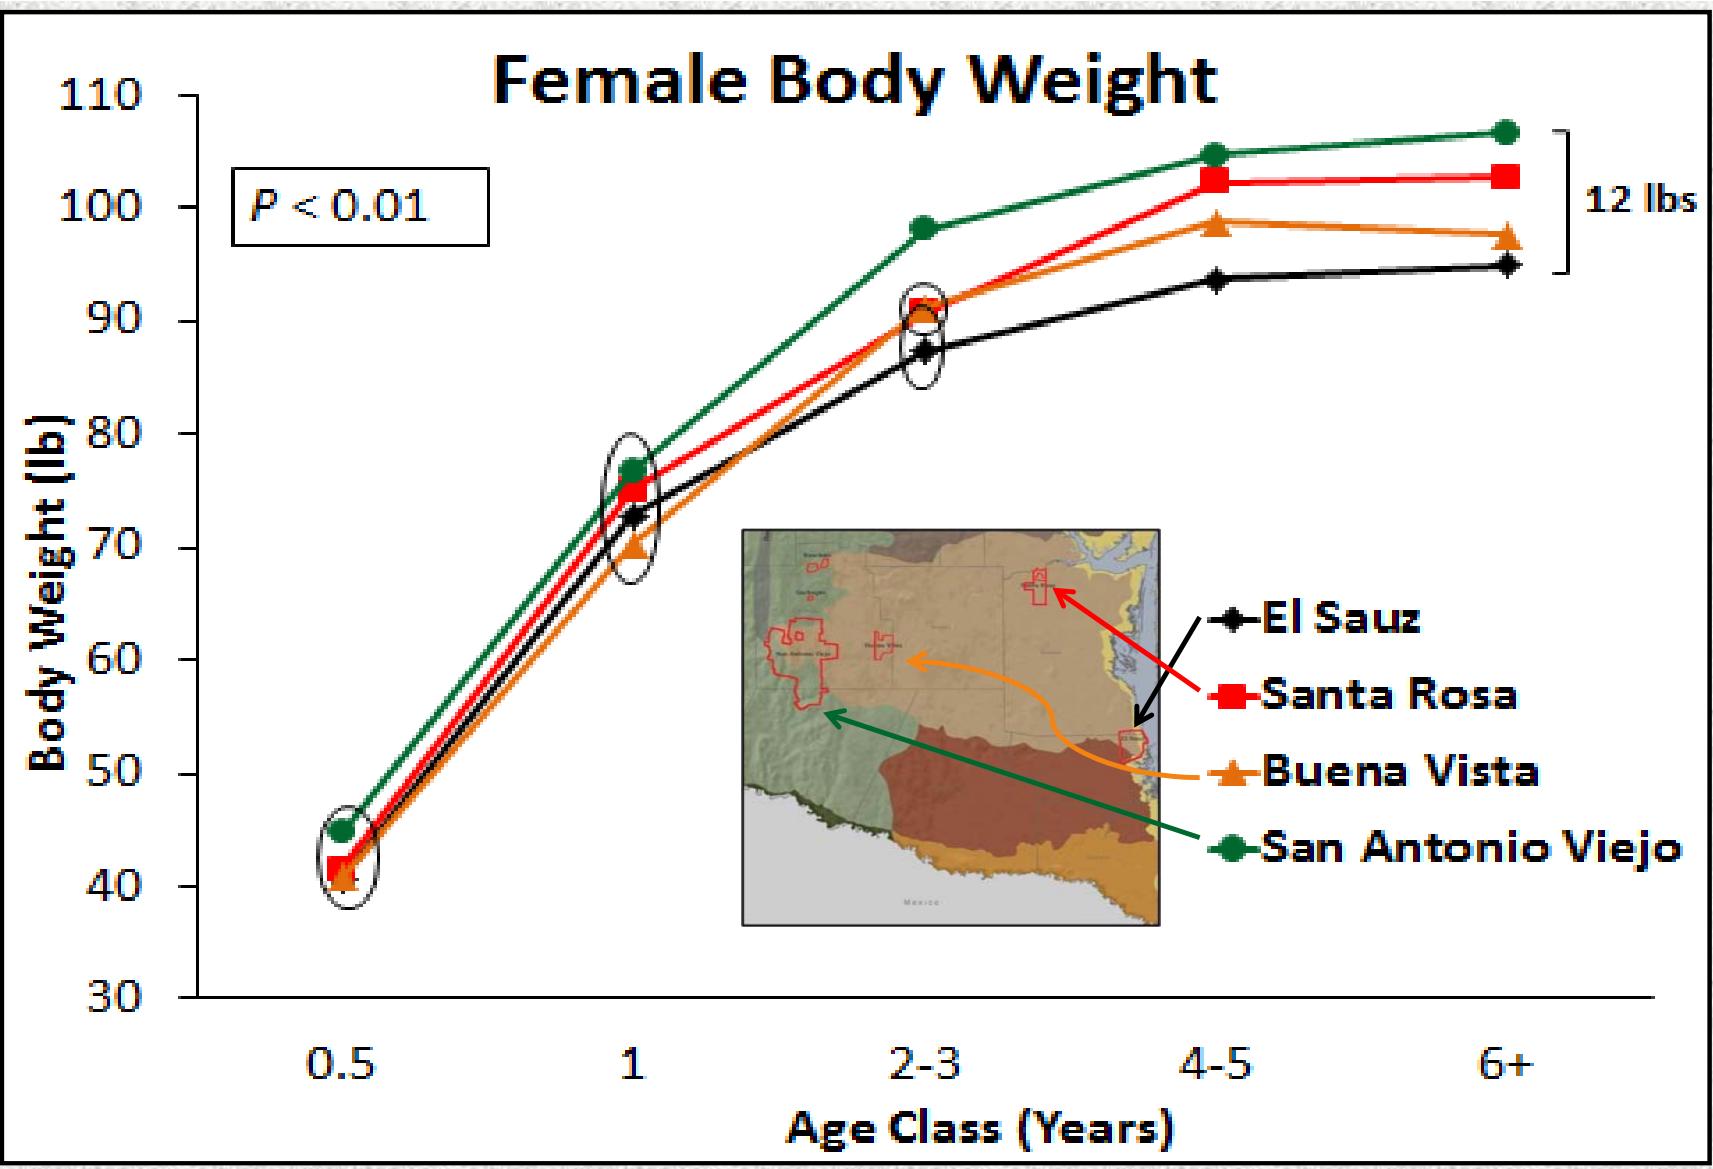

East Foundation

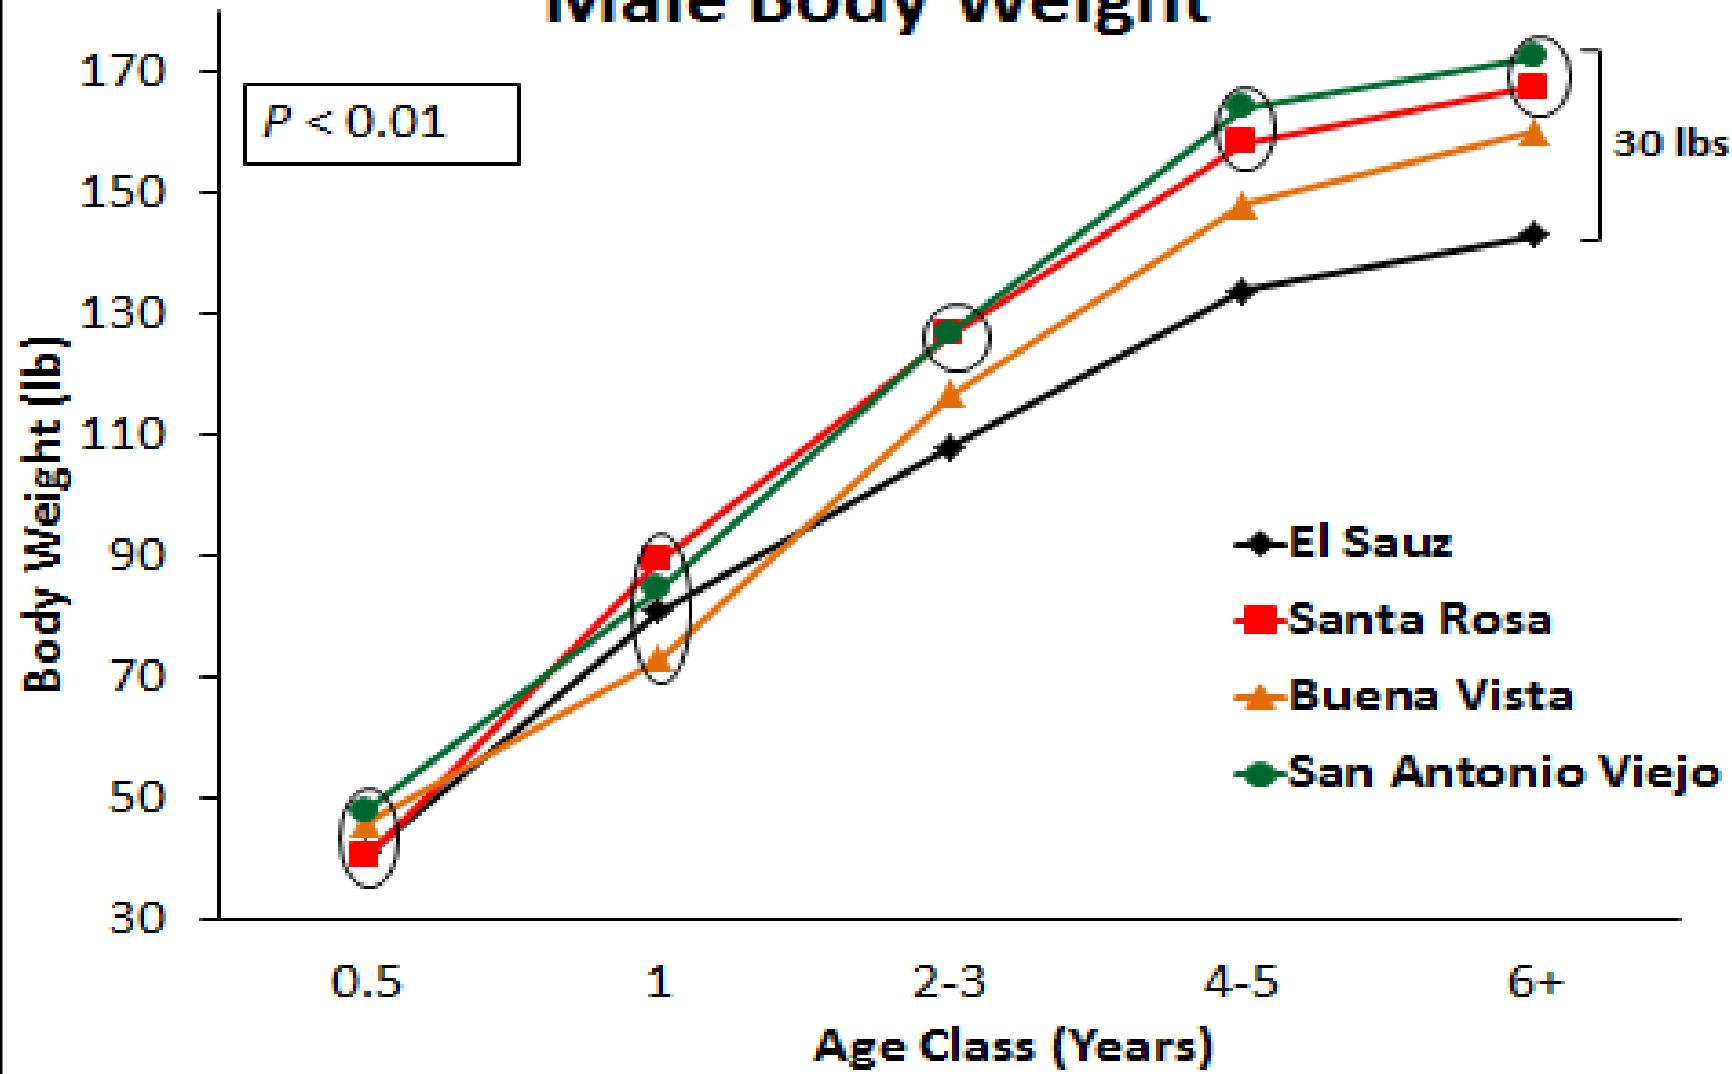

- Established from the estate of Robert C. East
- Private Operating Foundation
- Integrated program of research, education, and outreach
- Compatibility of wildlife conservation with cattle ranching

Directional Selection

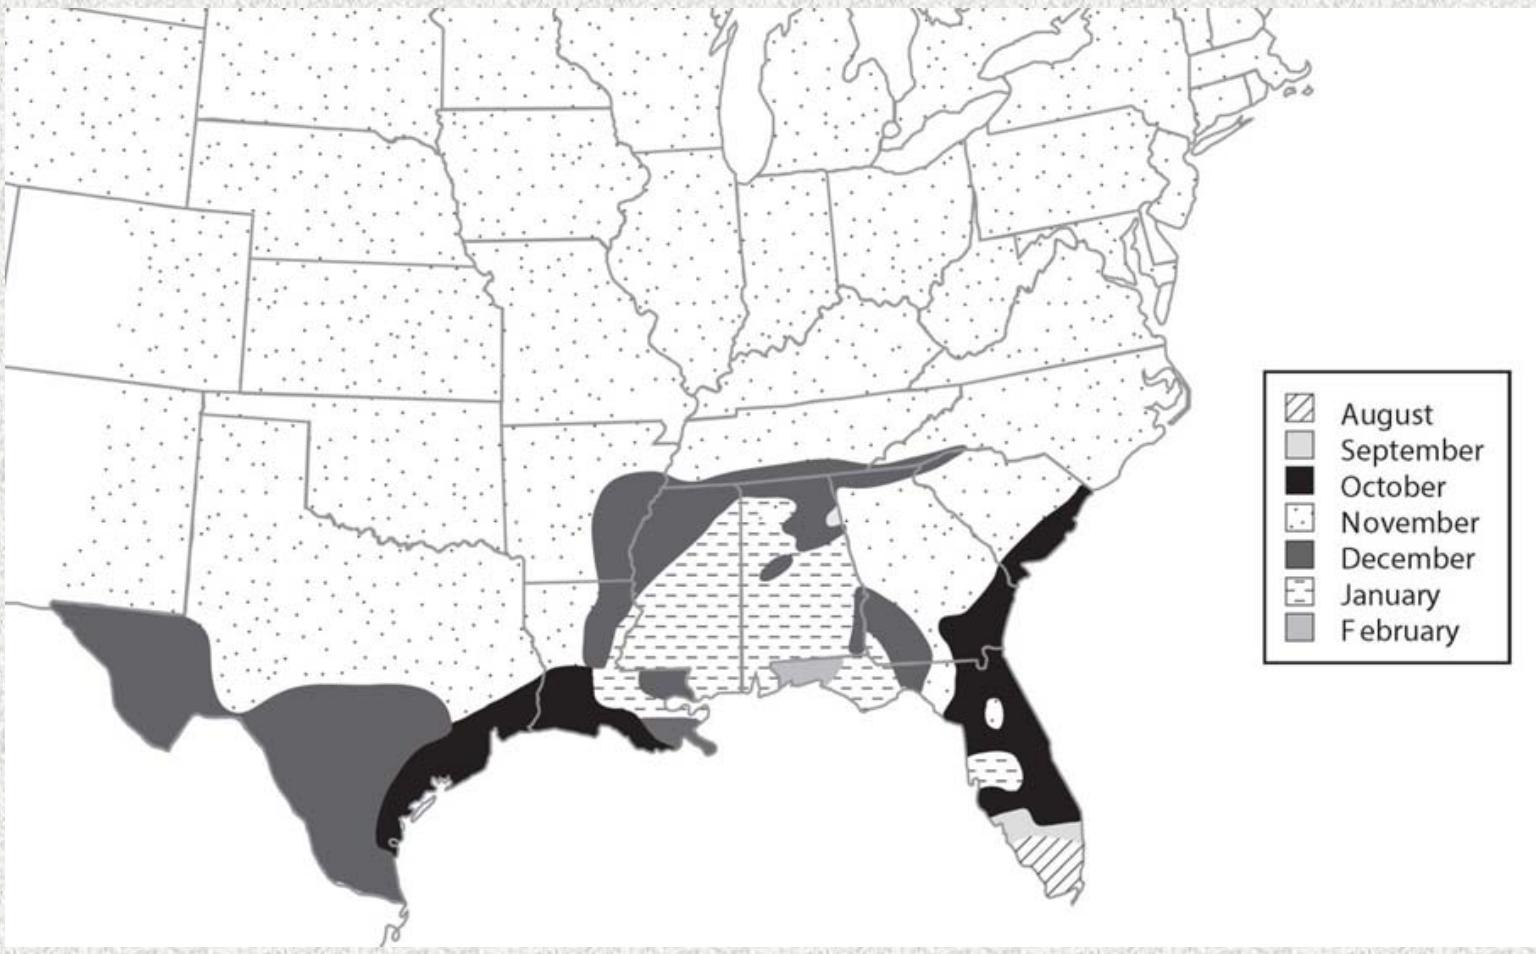

Effects of Past Management, Restoration

Mixing of Genetic Stocks: Adaptation to New Environments?

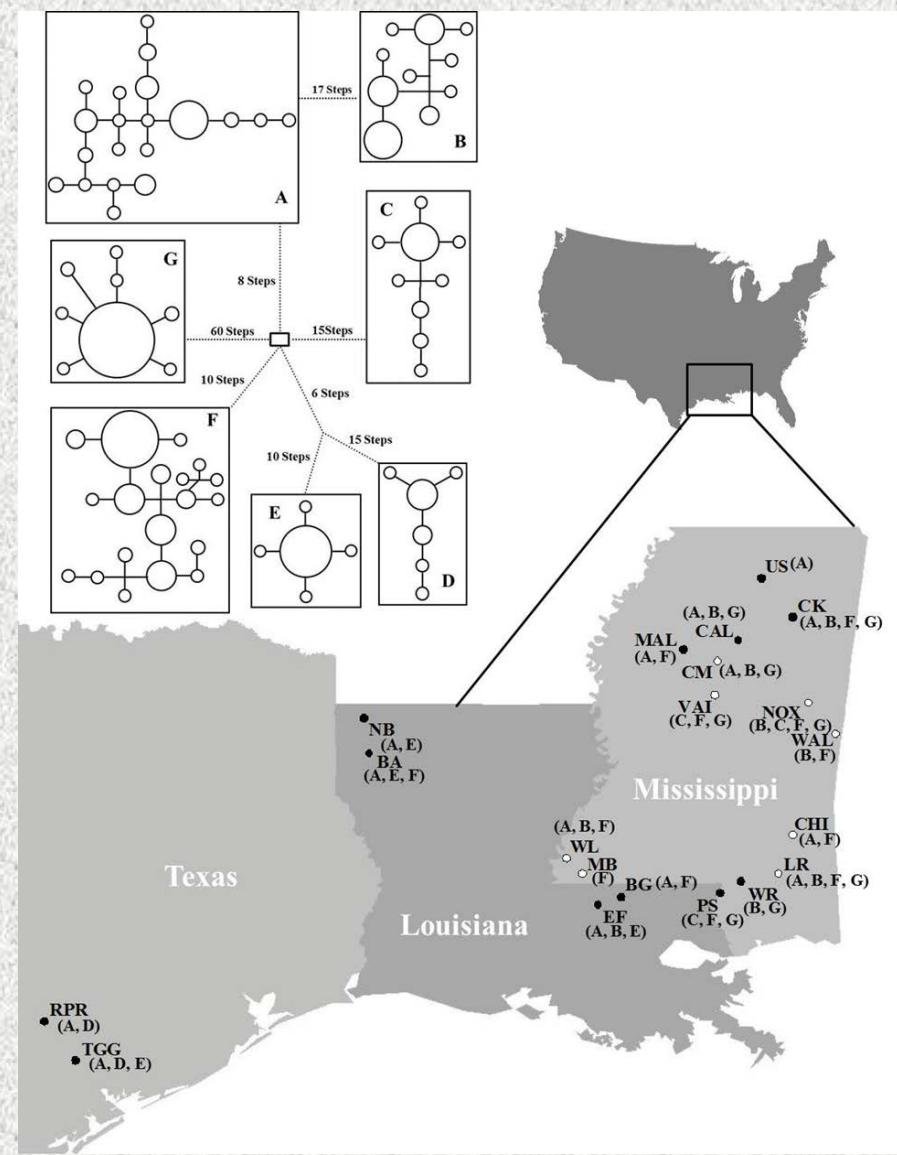

Breeding Dates

Breeding Dates

- Abnormal breeding associated with effects of restocking
- Difficult to demonstrate, indirect
- Not in every region
- Genetic influence in livestock, tropical vs. northern breeds of sheep, goats, etc.
- Who cares?
- Yearling bucks!

Brain Abscess in Southeastern Deer
